

Stormy Silent 90-200-270-500 L

Stormy Silent compressors are the logical consequence of the fight against noise pollution.

The simple construction, low 70-71 dB(A) noise level and compactness are the winning characteristics of this machine. Starting with the 4-HP model, an internal electric fan is installed to expel hot air and guarantee more effective compressor operation. The product line provides a transportable version for units up to 270 liters and a fixed version antivibration dampers for 500-liter units.
